WELCOME TO MOONWASHED

Hello, moon person.

You do not need to know your moon sign, own a crystal, or have a ritual routine. Curiosity is enough.

Look up. Learn
something.
Make a little meaning.

Each card has a question on the front and a short lesson on the back. Tap READ to turn it over, INDEX to browse, or a source number to explore further.

Meet the Moon

THE SKY

The Moon is Earth's natural satellite, about 239,000 miles away on average. It is a rocky world, marked by ancient impacts and lava plains. [03]

WELCOME TO MOONWASHED

Welcome to Moonwashed Apothecary. Let curiosity lead as you get to know the Moon, explore its stories, and make a little room for wonder. Come as you are.

TRY TONIGHT

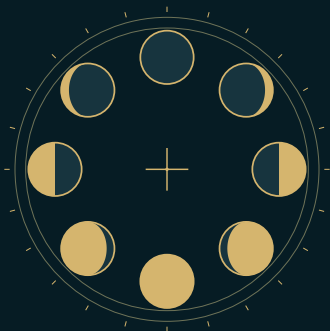

Look up, or open a lunar image. Describe three things without interpreting them. Then give this evening a name of your own.

Borrowed Light

THE SKY

Moonlight is reflected sunlight. Outside an eclipse, the Sun lights roughly half the Moon. We see changing portions of that half as it orbits Earth. A phase cycle lasts about 29.5 days. [01]

THE SYMBOL

Our Moonwashed reading: a changing appearance does not make you incomplete. A quieter season can still belong to a whole life.

TRY TONIGHT

Hold a ball under one lamp. Walk around the ball and notice how the lit portion looks different. Your viewpoint creates the phase.

New Moon

THE SKY

At new moon, the sunlit side faces away from Earth. The Moon is near the Sun in our sky and is usually invisible. [02]

MOONWASHED / BEGIN

A blank page, a chosen direction. In this deck, new moon means permission to start small, without a polished plan.

TRY THIS CYCLE

Write one intention and one action you can take within two days. Make the action tiny enough to actually do.

Waxing Crescent

THE SKY

A thin illuminated crescent grows after new moon. Waxing means the visible sunlit portion is increasing. [02]

MOONWASHED / TEND

Our crescent theme is care: feeding a beginning rather than demanding instant proof that it will succeed.

TRY THIS CYCLE

Choose one practical resource your intention needs: time, information, support, or a clearer boundary. Give it that resource.

First Quarter

THE SKY

First quarter is one quarter of the way through the phase cycle. Half the visible lunar disk is illuminated. [02]

MOONWASHED / CHOOSE

Moonwashed pairs this phase with agency. A decision can be useful even when you cannot see the whole road.

TRY THIS CYCLE

Name one obstacle. Divide a page into within my control and outside my control. Act on one item in the first column.

Gibbous means more than half the visible disk is illuminated. A waxing gibbous Moon is growing toward full. [02]

Review your intention. Keep one part that works. Change one part that does not. Let good enough count as movement.

THE SKY

At full moon, the Moon is opposite the Sun in our sky. Its Earth-facing side is sunlit; it rises around sunset. [01]

MOONWASHED / WITNESS

In this deck, fullness invites recognition: joy, effort, a truth you can finally name. Visibility is an option, never an obligation.

Gravity & Tides

THE SKY

Differences in the Moon's gravitational pull help create ocean tides. The Sun contributes too. Spring tides occur near new and full moons; neap tides near quarter moons. Local coastlines change the details.

[04]

THE SYMBOL

Moonwashed borrows ebb and flow as a metaphor for attention and effort. Ocean physics does not, by itself, establish that lunar phases control your emotions.

Draw two waves. Label one what replenishes me and the other what drains me. Choose one practical adjustment.

Eclipse & Blood Moon

THE SKY

A lunar eclipse happens when a full Moon crosses Earth's shadow. During totality, sunlight filtered through Earth's atmosphere can make it look reddish. The orbit's tilt prevents an eclipse every month.

[05]

THE SYMBOL

Our eclipse prompt is perspective. You may mark an eclipse with stillness; you do not have to interpret it as an omen or perform a ritual.

LOOK SAFELY

Lunar eclipses are safe to view directly. Solar eclipses need special viewing precautions. Keep the two events distinct.

Supermoon

THE SKY

Supermoon is an informal name commonly used for a full Moon near perigee, its closest approach to Earth. It can appear somewhat larger and brighter than a full Moon near apogee, the farthest point. [06]

THE SYMBOL

Moonwashed uses closeness as a reminder to pay attention. A bigger-looking Moon does not create an obligation to manifest harder or make a major decision.

TRY TONIGHT

Choose one ordinary thing to examine closely: a leaf, a familiar face, a sentence you wrote. Describe a detail you usually miss.

Blue & Black Moons

THE CALENDAR

A monthly blue moon is the second full Moon in one calendar month. A seasonal blue moon is the third full Moon in a season with four. One use of black moon means a second new Moon in a month. [09]

THE SYMBOL

These names are conventions, not new lunar phases. Blue moon usually says nothing about color. Our bonus-Moon theme is a second chance, freely chosen.

TRY TONIGHT

Return to an intention you abandoned. Decide whether to restart, reshape, or retire it. All three count.

Earthshine

THE SKY

Sometimes a crescent's dark-looking portion glows faintly. Sunlight reflected off Earth illuminates that part of the Moon. This is earthshine. [01]

THE SYMBOL

Our reading is reciprocity: light can arrive indirectly. Being supported does not make your own light less yours.

TRY TONIGHT

Name someone whose care reaches you quietly. Thank them in a way that feels natural, or write a private note about what their support makes possible.

The Far Side

THE SKY

The Moon turns once on its axis in the time it takes to orbit Earth, keeping roughly the same face toward us. Its far side receives sunlight too. Far side does not mean permanently dark. [07]

THE SYMBOL

Moonwashed reads this as a boundary: privacy can be healthy and intentional. You do not owe everyone a full account of your interior life.

TRY TONIGHT

Choose one thought or project to keep private for now. Write what would make it feel safe to share later, if ever.

THE TRADITION

In contemporary Western astrology, the Moon is associated with emotions, instinct, memory, and nurturing. A moon sign describes its zodiac position in an astrological chart. [13]

KEEP THE DISTINCTION

This is an interpretive belief system. An association in astrology does not establish that the Moon causes your feelings or determines your personality.
